About IPEX

At IPEX, we have been manufacturing non-metallic pipe and fittings since 1951. We formulate our own compounds and maintain strict quality control during production. Our products are made available for customers thanks to a network of regional stocking locations from coast-to-coast. We offer a wide variety of systems including complete lines of piping, fittings, valves and custom-fabricated items.

More importantly, we are committed to meeting our customers' needs. As a leader in the plastic piping industry, IPEX continually develops new products, modernizes manufacturing facilities and acquires innovative process technology. In addition, our staff take pride in their work, making available to customers their extensive thermoplastic knowledge and field experience. IPEX personnel are committed to improving the safety, reliability and performance of thermoplastic materials. We are involved in several standards committees and are members of and/or comply with the organizations listed on this page.

For specific details about any IPEX product, contact our customer service department.

INTRODUCTION

Thermoplastics and elastomers have outstanding resistance to a wide range of chemical reagents. The chemical resistance of plastic piping is basically a function of the thermoplastic material and the compounding components. In general, the less compounding components used the better the chemical resistance. Thermoplastic pipes with significant filler percentages may be susceptible to chemical attack where an unfilled material may be affected to a lesser degree or not at all.

Some newer piping products utilize a multi-layered (composite) construction, where both thermoplastic and non-thermoplastic materials are used for the layers. Layered composite material pipe may have chemical resistance that differs from the chemical resistance of the individual material. Such resistance however, is a function both of temperatures and concentration, and there are many reagents which can be handled for limited temperature ranges and concentrations. In borderline cases, it will be found that there is limited attack, generally resulting in some swelling due to absorption. There are also many cases where some attack will occur under specific conditions, but for many such applications, the use of plastic will be justified on economic grounds when considered against alternative materials. Resistance is often affected (and frequently reduced) when handling a number of chemicals or compounds containing impurities. For this reason, when specific applications are being considered, it may be worthwhile to carry out tests using the actual product that will be encountered in service. The listing that follows does not address chemical combinations.

The information is based on immersion tests on unstressed coupons, experiments and, when available, actual process experience as well as data from tests inclusive of stress from temperature and pressure. The end user should be aware of the fact that actual service conditions will affect the chemical resistance.

Chemicals that do not normally affect the properties of an unstressed thermoplastic may cause completely different behavior (such as stress cracking) when under thermal or mechanical stress (such as constant internal pressure or frequent thermal or mechanical stress cycles). Chemical resistance data from immersion tests cannot be unconditionally applied to thermoplastic piping components subjected to continuous or frequent mechanical or thermal stresses.

When the pipe will be subject to a continuous applied mechanical or thermal stress, or to combinations of chemicals, testing that duplicates the expected field conditions, as closely as possible, should be performed on representative samples of the pipe product to properly evaluate plastic pipe for use in this application.

RATINGS

Ratings are according to the product and suppliers.

The absence of any class indication for any given materials, signifies the absence of data for such material(s) with respect to the specific chemical(s), temperature(s) and concentration(s).

Note: Chemical resistance data is found in a laboratory setting and cannot account for all possible variables of an installed application. It is up to the design engineer or final user to use this information as guidance for a specific application design.

If a material is chemically resistant to the concentrated form of a specific chemical, it should be resistant to the diluted form of that same chemical.

All Chemical Resistance data for Polyvinylidene Fluoride (PVDF) contained within this manual has been provided, with written consent, by Arkema Inc.

NOTES

KYNAR® POLYVINYLIDENE FLUORIDE (PVDF) *FOR WASTE DRAINAGE SYSTEMS*

All Chemical Resistance data for Polyvinylidene Fluoride (PVDF) contained within this manual has been provided, with written consent, by Arkema Inc.

Kynar® Polyvinylidene fluoride (PVDF) resin is a tough engineering thermoplastic that offers a unique balance of performance properties. It has the characteristic stability of fluoropolymers when exposed to harsh thermal, chemical and ultraviolet environments.

For chemical and high temperature resistance, low permeability and high mechanical strength, Kynar PVDF resin is used as a contact surface for the production, storage and transfer of corrosive fluids. Kynar PVDF resin is used in mechanical components, fabricated vessels, tanks, pumps, valves, filters, heat exchangers, tower packing, piping systems, as well as other applications.

Corrosive Waste Drainage and Plenum Applications

IPEX Plenumline grade Kynar PVDF resin easily achieves the flame spread / smoke developed rating of 25/50 when tested in accordance with ASTM E84. This enables Plenumline PVDF pipe to be used in the plenum for applications such as corrosive waste drainage and laboratory chemical systems.

IPEX Plenumline utilizes Kynar PVDF resins that are designed especially for harsh environments such as:

- Pharmaceutical industries
- Chemical industries
- College laboratories
- High school laboratories
- Hospital laboratories

Third party testing of PVDF resin has confirmed the resin and the piping molded from the resin meet the International Mechanical Code (IMC) requirements for material installed in the plenum.

Material	Flame Spread Rating	Smoke Developed Rating
IMC Plenum Requirement	25	50
PVDF 740-02	5	35

In addition to its notable fire and smoke characteristics, PVDF resin has these important properties.

- Mechanical strength and toughness
- High abrasion resistance
- High thermal stability
- High dielectric strength
- High purity
- Resistant to most chemicals and solvents
- Resistant to ultraviolet and nuclear radiation
- Resistant to weathering
- Resistant to fungi
- Low permeability to most gases and liquids

The following pages list the guidelines for using PVDF products in chemical waste drainage applications. PVDF resin is suitable for short-term contact with many chemicals up to 300ºF (150ºC). If your application involves mixtures of chemicals and temperatures above 104ºF (40ºC), PVDF resin will likely be fine, but IPEX recommends that you consult our technical staff prior to installing your system.

Guidelines for using KYNAR® PVDF products in chemical waste drainage.

A+	Suitable for elevated temperatures varying with chemical in question.
A	Suitable for continuous ambient conditions and for short term elevated temperature varying with chemical in question.
B	Suitable for short term use at full strength under ambient conditions, and suitable for continuous use at ambient conditions in diluted form.
NR	If concentration will be less than 100%, please contact IPEX technical staff for assessment of a safe concentration at maximum exposure temperature.

Sulfur Dichloride		A
Sulfur Dioxide		A+
Sulfur Trioxide		B
Sulfuric Acid	Up to 60% in water	A+
Sulfuric Acid	60-93% in water	A+

A+: Suitable for elevated temperatures
A: Suitable for continuous ambient conditions and for short term elevated temperatures
B: Suitable for continuous use in diluted form - contact IPEX
NR: If concentration will be less than 100% - contact IPEX

*Pure substance unless otherwise indicated

KYNAR® POLYVINYLIDENE FLUORIDE (PVDF) *FOR WASTE DRAINAGE SYSTEMS*

CHEMICAL RESISTANCE DATA

Chemical Substance	Concentration*	Rating
Sulfuric Acid	98% in water	A
Sulfuric Acid, fuming		A
Sulfuryl Chloride		B
T		
Tetraethyllead		A+
Tetrahydrofuran	Aqueous solution/liquid	B
Tetramethylammonium Hydroxide	Up to 10% in water	A+
Tetramethylurea		B
Thioglycol		A
Thioglycolic Acid		A+
Thionyl Chloride		B
Thiophosphoryl Chloride		B
Thread Cutting Oils		A+
Titanium Tetrachloride		A+
Toluene		A+
Toluenesulfonyl Chloride		A
Tomato Juice		A+
Tributyl Phosphate		A
Trichloroacetic Acid	Up to 10% in water	A+
Trichloroacetic Acid	50% in water to pure	A
1,2,4-Trichlorobenzene		A+
1,1,2-Trichloroethane		A+
Trichloroethylene		A+
2,4,5-Trichlorophenol		A+
Tricresyl Phosphate		B
Triethanolamine	Aqueous solution/liquid	A
Triethylamine		A
Trifluoroacetic Acid	50% in water	A+
Trifluoroacetic Acid		A
Trimethylamine	Aqueous solution/gas	A
Turpentine		A+
U		
Urea	Aqueous solution/solid	A+

Chemical Substance	Concentration*	Rating

About the IPEX Group of Companies

As leading suppliers of thermoplastic piping systems, the IPEX Group of Companies provides our customers with some of the largest and most comprehensive product lines. All IPEX products are backed by more than 50 years of experience. With state-of-the-art manufacturing facilities and distribution centers across North America, we have established a reputation for product innovation, quality, end-user focus and performance.

Markets served by IPEX group products are:

- Electrical systems
- Telecommunications and utility piping systems
- PVC, CPVC, PP, ABS, PEX, FR-PVDF and PE pipe and fittings (1/4" to 48")
- Industrial process piping systems
- Municipal pressure and gravity piping systems
- Plumbing and mechanical piping systems
- PE Electrofusion systems for gas and water
- Industrial, plumbing and electrical cements
- Irrigation systems

This literature is published in good faith and is believed to be reliable. However it does not represent and/or warrant in any manner the information and suggestions contained in this brochure. Data presented is the result of laboratory tests and field experience.

A policy of ongoing product improvement is maintained. This may result in modifications of features and/or specifications without notice.
